About the summer school

The summer school includes 20 lectures by top researchers within their field of photovoltaics and tour in the Technical University of Denmark’s state-of-the-art PV laboratories. All meals and accommodations from October 9th to 13th are included along with transportation to the venue. One dinner is a summer school dinner with all the teachers. Furthermore, all participants get the opportunity to share their work by a short presentation to the other participants for valuable feedback from peers and teachers.
