

Professor in Experimental Carbon-based Nanotechnology

DTU Nanotech is a multi-disciplinary department based on both top-down and bottom-up micro- and nanotechnology.

DTU Nanotech wishes to strengthen its activities in experimental carbon-based nanotechnology. The aim for DTU Nanotech is to secure the department's leading position and excellence in fabrication, characterisation and utilisation of carbon-based materials.

Responsibilities and tasks

DTU Nanotech therefore seeks a professor with expertise in the following areas:

- Large-scale fabrication of carbon-based materials – including carbon nanotubes and graphene
- Integration of carbon nanomaterials with conventional silicon technology and device fabrication
- Comprehensive characterisation of carbon-based materials – including transmission-electron-microscopy and electrical characterisation
- Innovation and industrial collaboration in carbon-based nanotechnology

The professor will be affiliated with present activities in fabrication, characterisation, integration and utilisation of carbon nanotubes and graphene, and is expected to participate actively in international as well as national collaborative projects. The professor is expected to establish relations to other research groups at DTU and at the department working with carbon-based materials and with other departments and centers at DTU, e.g. DTU Cen and DTU Fotonik, working with characterization of carbon-based materials.

The successful candidate is expected to take a lead position in teaching at the bachelor-, master- and PhD levels.

Qualifications

Candidates should already have obtained well-documented international recognition within their research field. Employment implies original research at the highest international level within all of the above mentioned research themes.

The successful candidate must be able to document substantial experience with teaching at the B.Sc., M.Sc. and PhD levels in micro- and nanotechnology, including the development of course curricula.

Assessment

In the assessment of the candidates consideration will be given to:

- the ability to teach
- scientific production at international level, research potential and ability to lead and develop a research team
- the ability to promote and utilize research results
- experience with innovation activities
- an all-round experience basis, including international experience
- the ability to contribute to the development of the Department's internal and external cooperation
- track record in attracting funding to the research area
- visions within the research area

For the specific position consideration will also be given to:

- the ability to instigate new teaching activities
- experience with outreach activities
- experience with international collaborations
- experience in cross-disciplinary research

Salary and terms of employment

The appointment will be based on the collective agreement with the Confederation of Professional Associations. The allowance will be agreed with the relevant union.

Further information

Further information may be obtained from Head of Department Mogens Rysholt Poulsen, tel.: +45 45255757.

You can read more about DTU Nanotech on www.nanotech.dtu.dk

Application procedure:

We must have your online application by **xx x 2013**.

Applications must be submitted as **one PDF file** containing all materials to be given consideration. To apply, please open the link "apply for this job online," fill in the online application form, and attach **all your materials in English in one PDF file**.

The file must include:

- Application (cover letter)
- CV
- List of publications indicating scientific highlights
- Documentation of teaching experience
- A plan for future research

All interested candidates irrespective of age, gender, disability, race, religion or ethnic background are encouraged to apply.
